

Time use diary design for our times: general principles for online design

Oriel Sullivan, Jonathan Gershuny, Juana Lamote de Grignon-Perez

Centre for Time Use Research
University College London

Back to first principles: Outline

- What is time use diary data used for?
- What principles underpin the historical development of state-of-the-art pen and paper time use diaries?
- What suggestions have been made to simplify TUD collection?
- What suggestions have been made to digitalise TUD collection?
- Can we combine these features: principles, simplification and digitisation?

The need for full, general purpose, time use diary data

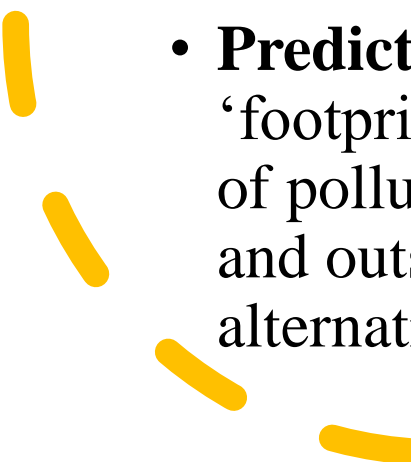

- Time use diary data is increasingly recognised as a crucial part of the toolkit of researchers and analysts across a wide and growing range of research and policy-related applications
- Full, general purpose, time use diary data has been shown to make important contributions to (at least) five areas of public policy:

Policy applications I: direct measures

- **Estimating extended economic output and tracking economic processes.** Technological change moves work both into and out of the money economy; paid and unpaid and care work appear together in time diary accounts. Time use data therefore provides a basis for quantifying and valuing non-money output, to be included alongside conventional GNP (*nb SDG 5.4 'recognize and value unpaid care and domestic work'*)
- **Distributional (in)equalities and human capital formation.** The time-use diary's comprehensive coverage allows analysis of (particularly gender) differentials in all work and consumption time (*SDG 5.4 aims to achieve gender equality and empower women and girls by addressing the unequal distribution of unpaid care and domestic work*)
- **Estimates of the contribution of experienced time to instantaneous wellbeing.** Time use diary data including an affective field recording enjoyment allows estimation of this measure of social progress (Kahneman et al 2004, Krueger et al 2009, Stiglitz, Sen and Fitoussi 2009).

Policy applications II: the use of rates with TU data

- **Estimating health consequences of daily activities.** As well as direct information on sleep and eating frequency and duration, exercise levels (metabolic equivalents) can be applied to time-use data on activities; and infection risks of daily activity patterns may be estimated by combining evidence of activity, location and co-presence (Sullivan et al 2021).
 - **Predicting environmental sustainability.** Populations' activity patterns have 'footprints' in the form of energy and other material requirements, and in terms of pollution. Time-use data enables the capturing of such 'footprints' both inside and outside the home, providing potential inputs to scenario modelling of alternative futures (Jiang, Motose and Ihara 2022; Madsen and Weidema 2023).
- 

For all these, and a growing number of other applications we need good, general-purpose, time use data

First principles

- Decades of design development across several continents underpin the most recent general purpose pen and paper diaries – the full Eurostat Harmonised European Time Use Survey (HETUS) diary is widely regarded as a ‘gold standard’ pen and paper template.....

Completed Diary: the Harmonised European Time Use Survey diary (HETUS)

| Day 1 Time: 7am – 10am Morning | | Day 1 Time: 7am – 10am | | Were you alone or with somebody you know? Mark all relevant boxes | | | | | | | How much did you enjoy this time? 1 =not at all 7 =very much |
|--------------------------------------|--|---|---|--|-------------------------------------|-------------------------------------|--------------------------|-------------------------------------|--------------------------|--------------------------|--|
| Time: 7am-10am Morning (am) | What were you doing? Please write down one main activity. | If you did something else at the same time, what else did you do? | Did you use a smartphone tablet, or computer? | Where were you? Location, or mode of transport | People who live with you | | | | | | |
| | | | | Alone | Spouse / partner | Mother | Father | Child aged 0-7 | Other person | Others you know | |
| 7am-7.10 | <i>Woke up the children</i> | | <input type="checkbox"/> | <i>At home</i> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 5 |
| 7.10-7.20 | <i>Had breakfast</i> | <i>checked emails</i> | <input checked="" type="checkbox"/> | ↓ | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 6 |
| 7.20-7.30 | " " | <i>Talked with my family</i> | <input type="checkbox"/> | | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 5 |
| 7.30-7.40 | <i>Cleared the table</i> | <i>Listened to the radio</i> | <input checked="" type="checkbox"/> | | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 4 |
| 7.40-7.50 | ↓ | ↓ | <input checked="" type="checkbox"/> | | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | ↓ |
| 7.50-8am | <i>Helped the children dressing</i> | <i>Talked with my children</i> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | | |
| 8am-8.10 | " " | ↓ | <input type="checkbox"/> | ↓ | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | ↓ |
| 8.10-8.20 | <i>Went to the day care centre</i> | ↓ | <input type="checkbox"/> | <i>on foot</i> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 1 |

Use an arrow or quote marks to record that an activity lasted longer than 10 minutes.

4 design principles underpin this design:

1. **Multiple fields**. The instrument should collect, in addition to a background questionnaire, **diary information on activities** (primary and secondary), **locations** (places or transport modes), **copresence** (multiple codes), **ICT devices** used (multiple codes) and **affective responses** to current activities.
-

1. **Multiple fields**. The instrument should collect, in addition to a background questionnaire, **diary information on activities** (primary and secondary), **locations** (places or transport modes), **copresence** (multiple codes), **ICT devices** used (multiple codes) and **affective responses** to current activities.
2. **Continuous fields** **spanning the entire diary day**. Characteristics which may apply to all activities (eg co-presence) should be collected as complete diary fields. Continuous fields provide flexibility for both collection and analysis.

1. **Multiple fields.** The instrument should collect, in addition to a background questionnaire, **diary information on activities** (primary and secondary), **locations** (places or transport modes), **copresence** (multiple codes), **ICT devices** used (multiple codes) and **affective responses** to current activities.
2. **Continuous fields spanning the entire diary day.** Characteristics which may apply to all activities (eg co-presence) should be collected as complete diary fields. Continuous fields provide flexibility for both collection and analysis.
3. **Independent fields.** An 'episode' is defined as 'a period of no change in any diary field'. So **start and end timings for each field should be collected independently of all other fields** to enable recording and analysis of variations and overlaps between the timings of the various diary fields.

1. **Multiple fields.** The instrument should collect, in addition to a background questionnaire, **diary information on activities** (primary and secondary), **locations** (places or transport modes), **copresence** (multiple codes), **ICT devices** used (multiple codes) and **affective responses** to current activities.
2. **Continuous fields spanning the entire diary day.** Characteristics which may apply to all activities (eg co-presence) should be collected as complete diary fields. Continuous fields provide flexibility for both collection and analysis.
3. **Independent fields.** A diary 'episode' is defined as 'a period of no change in any diary field'. So **start and end timings for each field should be collected independently of all other fields** to enable recording and analysis of variations and overlaps between the timings of the various diary fields.
4. **Visual interface to aid recall.** Diary instruments should reveal all diary fields (or as many as possible) throughout the day. Decades of design work on time use diaries have established the principle of a *visual presentation to help respondents to envisage and recall their entire day.*

Time use diary design for our times?

- Life is inexorably moving online; online surveys and smartphone apps have been increasingly prominent. For reasons of cost and convenience this is undoubtedly the future of time use diary data collection.
- Problem: many online diaries are still designed in ‘survey-style’ format:
 - 1) – doesn’t meet principle of independent fields
 - 2) – burdensome for respondents; result has been cutting back on the number of diary fields
- Can we do better by going back to design first principles?

International organisation recommendations for TUD collection in LMICs:

- **UN Women (CEGS) 2021**
 - **Light time use diary**, 30-35 ICATUS activities + stylized questions for 2ndary/3rdary activities and child supervision (Charmes, 2021)
- **World Bank (Development Research Group) 2022**
 - **Light time use diary** with 25-30 ICATUS activities + stylized questions (Beegle, 2022)

- **UNSD 2024**

- ‘Guide to Producing Statistics on Time Use Module’ (UNSD 2024).
Light time use diary with c25 ICATUS activities + stylized questions on supervisory childcare

- **ILO (Department of Statistics) 2023**

- The TUS add-on module on LFS recommendations are aligned with the UNSD guidelines - a hybrid approach where a full time use survey not feasible i.e. **interview-collected light time use diaries + stylized questions**

(ILO ‘Own-use provision of services: measurement guide’, 2023)

However:

These recommendations are not for use of the visual light diary interface, but simply refer to the collection of a simplified (ie limited) range of activities using a survey-style approach

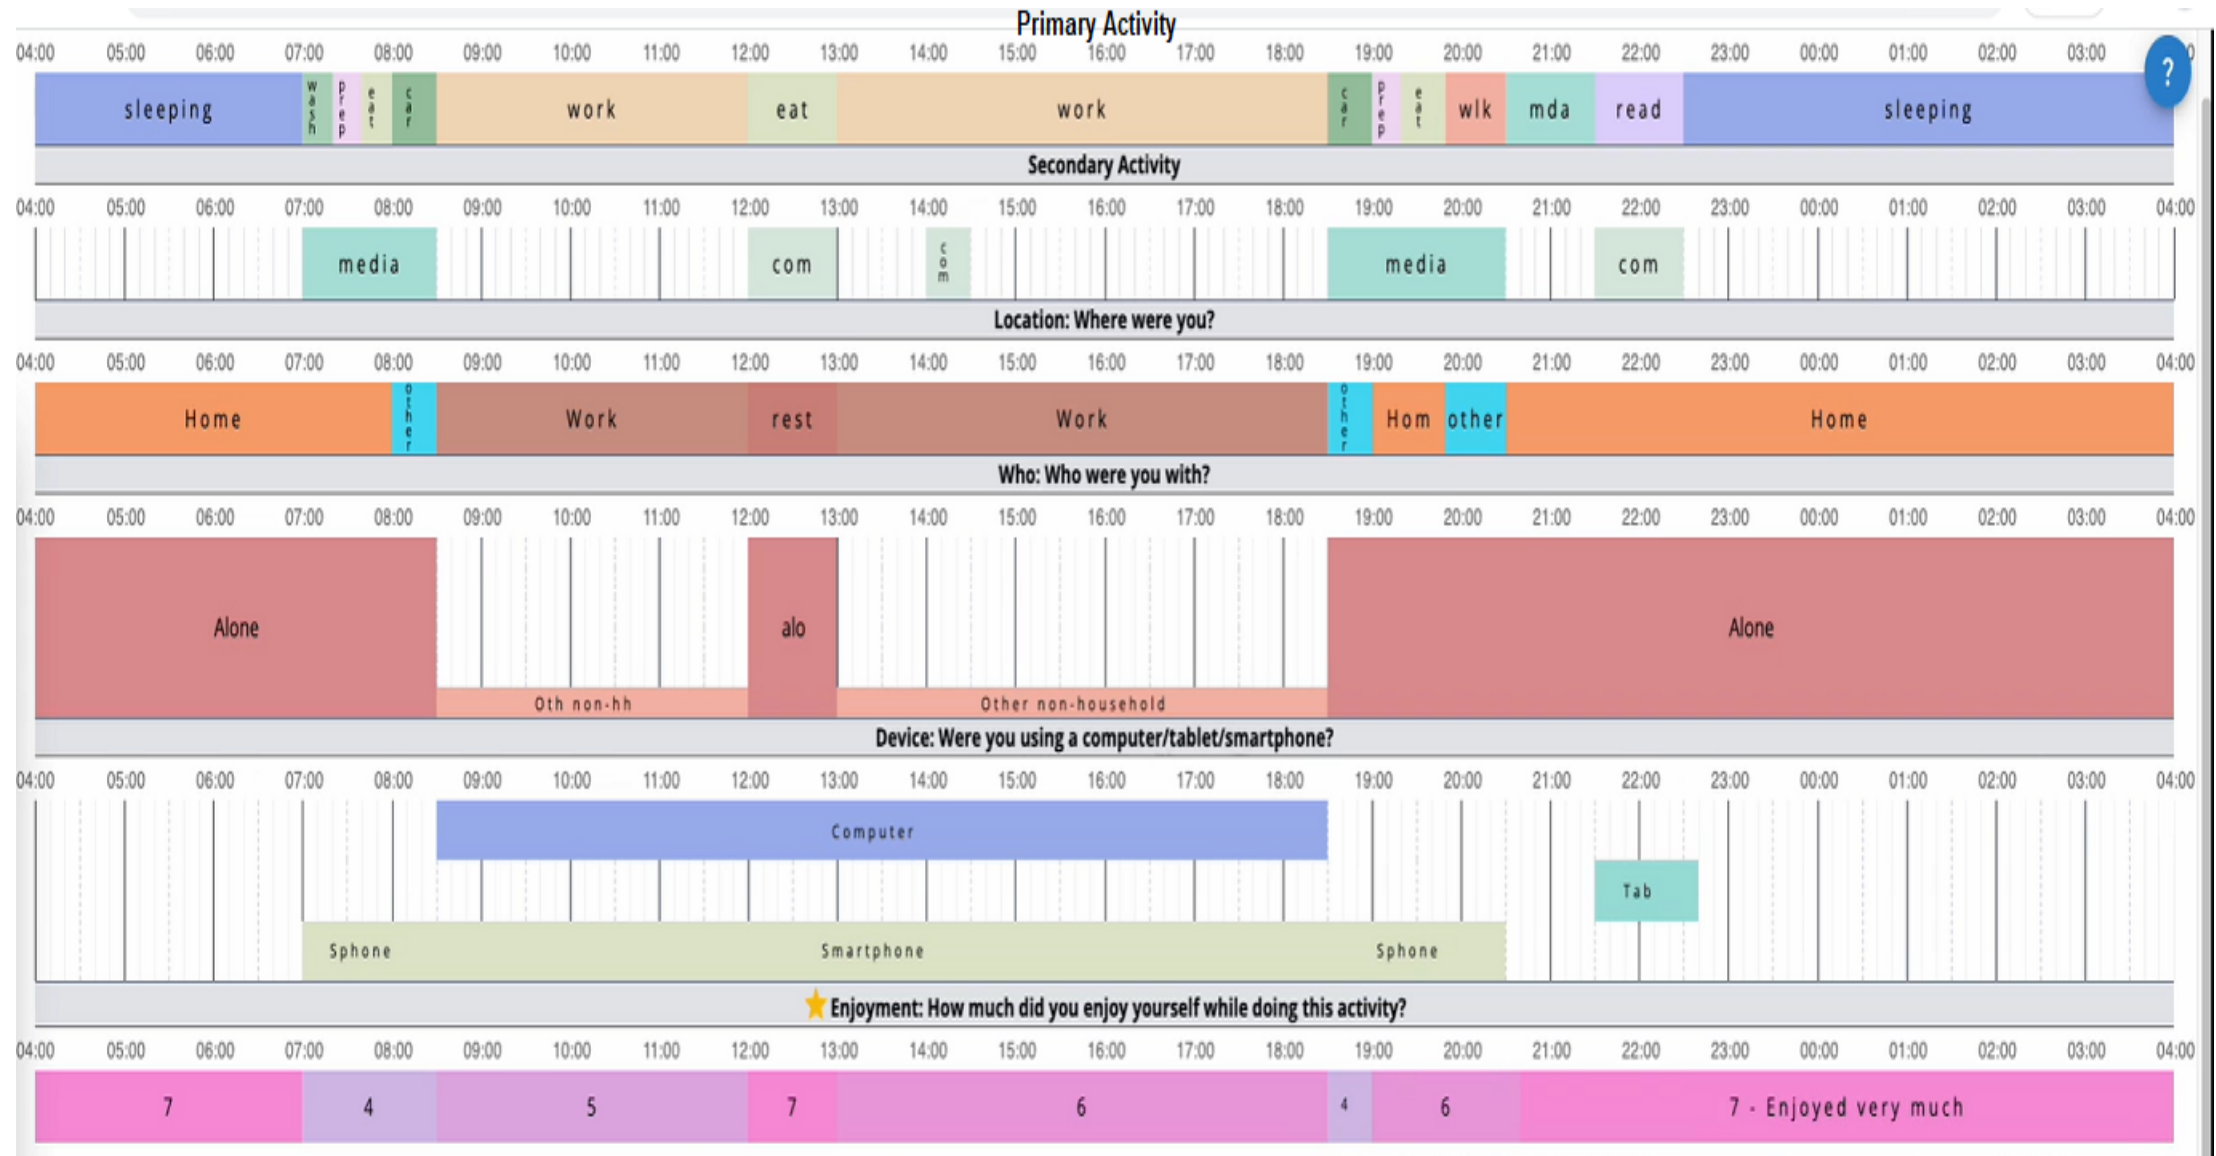

Therefore, they do not meet the principles of multiple continuous independent diary fields with a visual interface

Combining design principles using digitisation: the Extended Light Digital Diary Instrument (ELiDDI)

- Using digital technology we adapted the light diary visual design to collect the same range of information as the HETUS diary i.e. multiple, continuous independent diary fields with a visual, diary day, interface
- A HETUS-style nationally representative survey of the UK was run in April 2023 using the ELiDDI (conducted by the National Centre for Social Research)
- Average completion time was 26 minutes (excluding very long and very short completion times)

Completed ELiDDI diary day: wide screen

Filling in the primary activity: wide screen

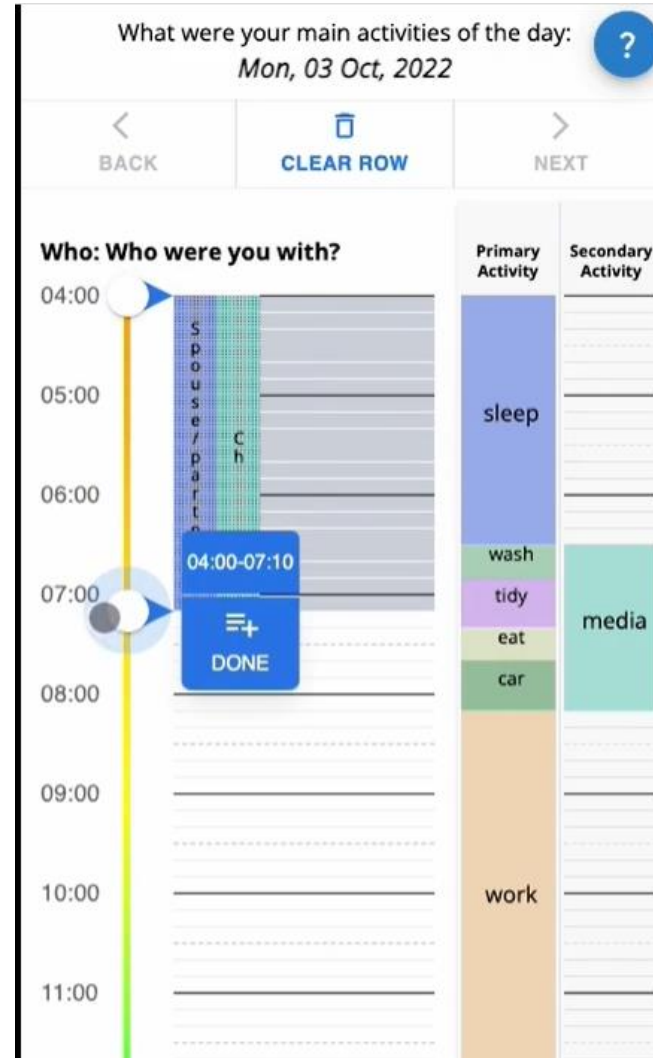

Navigation controls: < BACK CLEAR ROW > NEXT

21:30 - 22:30
reading in books

| Personal | Unpaid work | Caring | Work/ Study | Travel | Recreation | Other |
|---|--|--|---------------------------------------|------------------------------|--|-------------------------------|
| sleeping | cleaning tidying house | caring for own children | paid work (including at home) | travelling: walking/jogging | Watching TV/DVD, listening to music | Filling in the time use diary |
| resting | clothes washing, mending, sewing | caring for other children | formal education | travelling: cycle | Talking on phone, texting, email, social media, read/write letters | other not listed (enter) |
| washing, dressing | maintenance of house, DIY, gardening, pet care | help, caring for adult household members | recreational courses, study | travelling: motorbike, moped | reading including e-books | |
| eating, drinking, meal, at home or work | shopping, bank etc including internet | unpaid help, caring for adults not in your household | voluntary work for club, organisation | travelling: in own car | using computer | |
| preparing food, cooking, washing up | | | work/study break | travelling: taxi/uber/lift | playing computer games | |
| services eg. doctor/dentist/hairdresser | | | | travelling: public transport | spending time with friends, family | |
| church, temple, mosque, synagogue, prayer | | | | travelling: other | hobbies | |
| | | | | | walking/dog walking | |
| | | | | | playing sports, exercise | |
| | | | | | going out to eat, drink eg pub, restaurant | |
| | | | | | cinema, theatre, sports, cultural event | |

- ELiDDI retains the visual simplicity of the ‘light diary’ design, but uses online functionality to offer multiple continuous diary fields, with extended lists of activities via drop-down menus (plus the option of additional pop-up boxes including questions about specific activities)
- The co-presence field, for example, in addition to providing full information on child co-presence, can be used to ask additional questions about the nature of particular activities done in the co-presence of children (i.e. the nature of care responsibilities)
- The full diary day is visualised as a whole (aiding recall)

Completed ELiDDI diary day: vertical screen for smartphones

The importance of the principles of multiple, independent, and continuous diary fields: the example of child care time

Child-related time (Minutes/day, UK Adults, ELiDDI, March-April 2023); primary & secondary activity & child (<12) co-presence

| | Primary activity | Secondary childcare | Child co-presence | Row total | Child co-presence as % of primary time |
|----------------------------|------------------|---------------------|-------------------|-----------|--|
| sleep, rest, personal care | 481 | 5 | 78 | 564 | 16% |
| eat, drink | 60 | 2 | 11 | 72 | 18% |
| paid work @ workplace | 121 | 0 | 6 | 128 | 5% |
| paid work @ home | 52 | 1 | 5 | 59 | 10% |
| unpaid work & education | 107 | 4 | 16 | 126 | 15% |
| shopping @ shops | 20 | 1 | 2 | 22 | 10% |
| shopping @ home | 6 | 0 | 1 | 6 | 16% |
| computing | 27 | 0 | 3 | 30 | 11% |
| out-home leisure | 113 | 3 | 6 | 122 | 5% |
| home leisure | 175 | 3 | 29 | 207 | 17% |
| all travel | 52 | 2 | 8 | 62 | 16% |
| childcare | 30 | 10 | | 39 | (100%) |
| missing | 3 | 0 | 1 | 3 | |
| Column total | 1246 | 31 | 166 | 1440 | |

Child-related time: Primary and secondary childcare and child co-presence across the UK pandemic (fathers and mothers, UK CTUR 6-wave pandemic TUS).

The figure shows changes in childcare time (mins per day) across 6 waves of the UK CTUR pandemic survey data for mothers and fathers. The sample of parents is men (945) and women (1,039) up to 55 years old living with children (N=1,984 quite homogeneously distributed across waves).

ELiDDI design extension: CATI/CAPI format

- Not everyone will be able to access an online time use diary, particularly in LMICs, so a CATI version of the ELiDDI diary was also used, in which phone interviewers record the diary day in the same way as online respondents (10% of respondents)
- In our nationally representative UK survey we found that the CATI version information was as good quality as the online version, with slightly higher response rates. It was also regarded positively by the phone interviewers, who found it easy to understand and complete.
- The CATI version of the ELiDDI took on average 2 more minutes to complete than the web version : approximately 28 minutes vs approximately 26 minutes (excluding very long and very short completion times).

- **The CATI format would be transposable and equally applicable to a CAPI design, with the advantage that respondent and interviewer could look together at the visual interface showing the diary day.....**

Click and drag accessibility?

- This technology is not accessible to everyone, and is listed as level AA (webpages should conform) in the latest Web Content Accessibility Guidelines (WCAG).
- However, accessibility conformity can be provided with use of zoom tools for the timeline, and clicking at the start and end of an activity, rather than dragging (ie click-click rather than click and drag)
- In addition, and at least as important, those not able to access the online tool at all will always need alternative options (e.g. CATI)

Overview: Back to first principles

- What is time use diary data used for?
- What principles underpin the historical development of state-of-the-art pen and paper time use diaries?
- What suggestions have been made to simplify TUD collection?
- What suggestions have been made to digitalise TUD collection?
- Can we combine these features: principles, simplification and digitisation?

Summary points: ELiDDI

The ELiDDI design mimics the visual intuitiveness and simplicity of the light diary design, but includes multiple fields of a full diary

The digital functionality enables expansion of the light diary via dropdown menus to the full HETUS activity classification, while maintaining the simple and intuitive light diary visuals

This makes it analogous both visually and in terms of functionality to the gold-standard pen and paper design, maintaining the built-in independence of multiple diary fields.

Thank you

ELiDDI HETUS-style survey (parallel run with the UK OTUS) – run in April 2023

- ELiDDI diary tool with full HETUS activity classification and diary fields
- Individual questionnaire completion + 2 randomly allocated diary days
- Phone completion by interviewer offered to ‘hard to reach’ population (10% of sample)
- N= 3874 diary days collected from national population-representative sample of individuals

Example of a survey-style diary: The Millenium Cohort Study App: UK 2014
